SIT764 Project Design / SIT782 Project Delivery

Individual Pass Task 2.1: Working in a team

Overview of the task

Working in a team is dependent on many things, comunication first of all. One step below are the tools that make working together efficent. Comunication can fix problems with the tools, but the tools cannot fix the comunication , although they help quite a lot.

The tools and methodologies that we will follow are the following

Agile Development Scrums using Trello GIT

These three make the bulk of every IT person's life.

Please use the following playlist to get accustomed. The playlist is on Lynda, LinkedIn learning platform, which is available for free to all the Deakin Students.

Submission Details

GITHUB - Create a github account and create a project. Clone the project onto your computer, create a branch called "development-feature-1", commit it and push it. Then merge the branch into the master, commit it and push it. Upload a screenshot of your git hub page showing the commits.

TRELLO - Create a simple enough project , or process (cooking a complex dish ?) , and create a TRELLO board with all of the Tasks very well defined and with an "effort score" associated with them - the effort score can be a simple number next to the title.

The board should be divided into

Backlog - Doing - Done - Sprint 1 - Sprint 2

Prepare the plan and provide a screenshot and a description of the project on Ontrack

provided via OnTrack.
